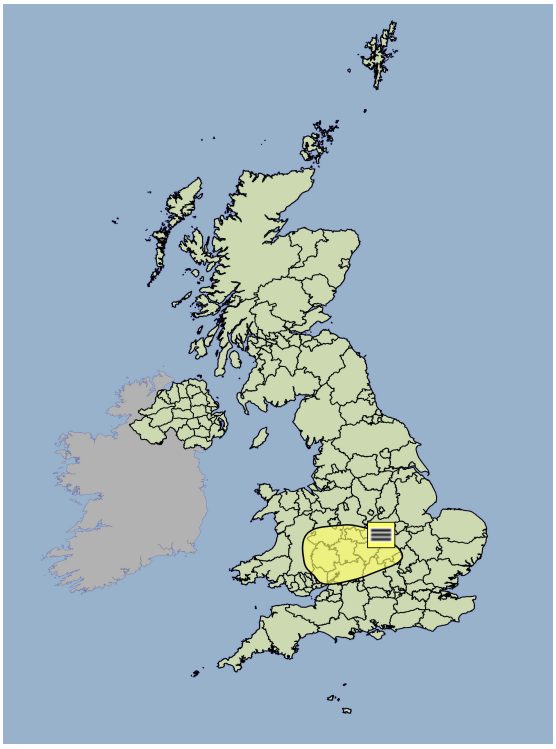
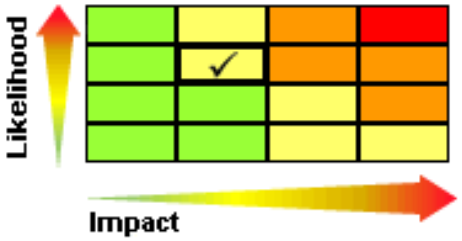
National Severe Weather Warning Service





Chief Forecasters Assessment
One of the coldest nights of the winter so far across southern Britain. Across parts of the Midlands, east Wales and the Home Counties, the air contains rather more moisture than further south, increasing the risk of freezing fog patches. As often in such situations, the fog is likely to be patchy in nature, with some areas escaping entirely.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **01:00 on Wed, 20th Jan 2016** until **10:30 on Thu, 21st Jan 2016**

Patchy but locally dense freezing fog, already across some western parts of the Midlands, is expected to become somewhat more widespread overnight, although not everywhere will be affected. A few icy patches are also likely. Please be aware of locally hazardous driving conditions.
